

ROBOT RALLY
PROJECT

First design

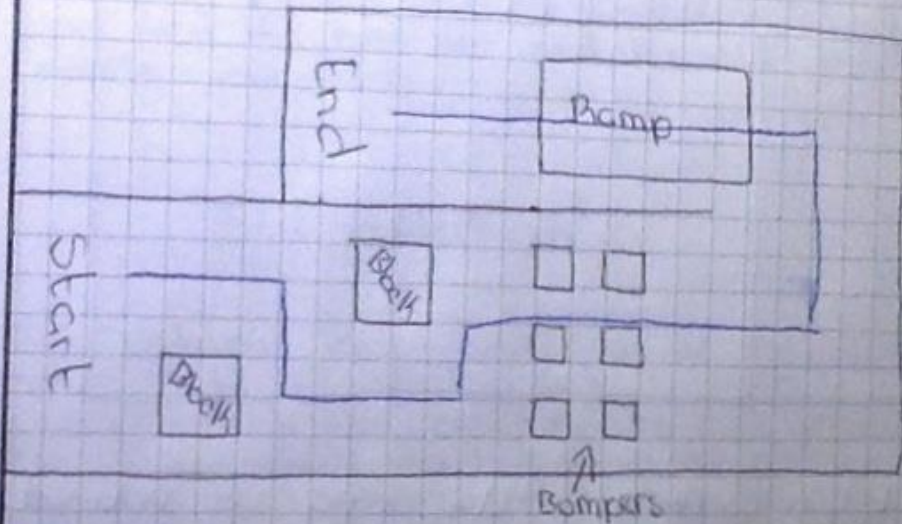

We began working on the arena. We noticed that there was not enough cardboard to do our arena design so we had to improvise on the building of the arena. We asked for objects to use as obstacles for the robot.

FIRST DESIGN

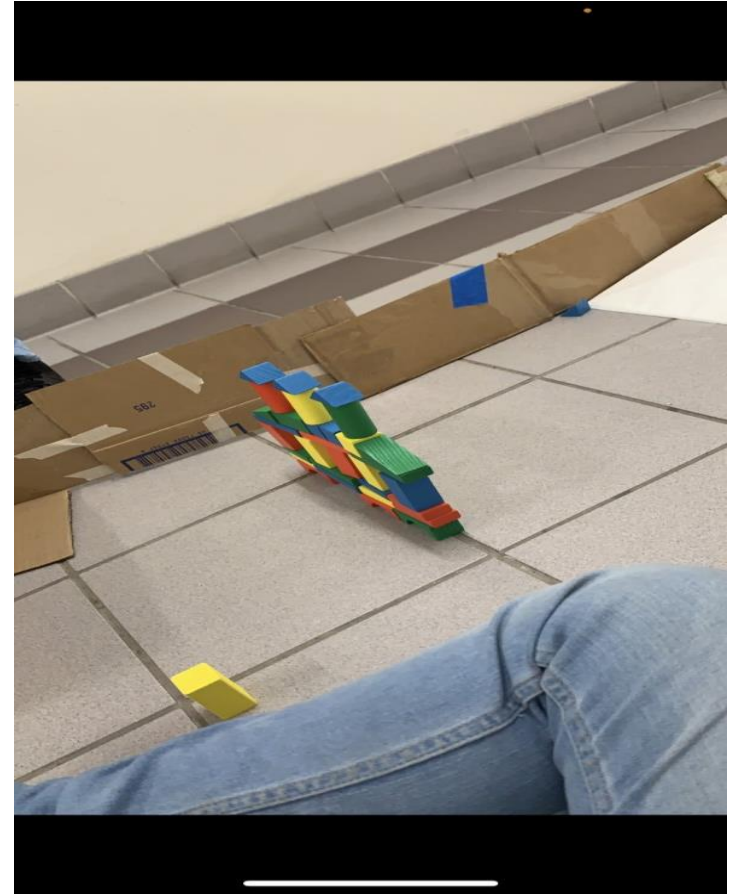

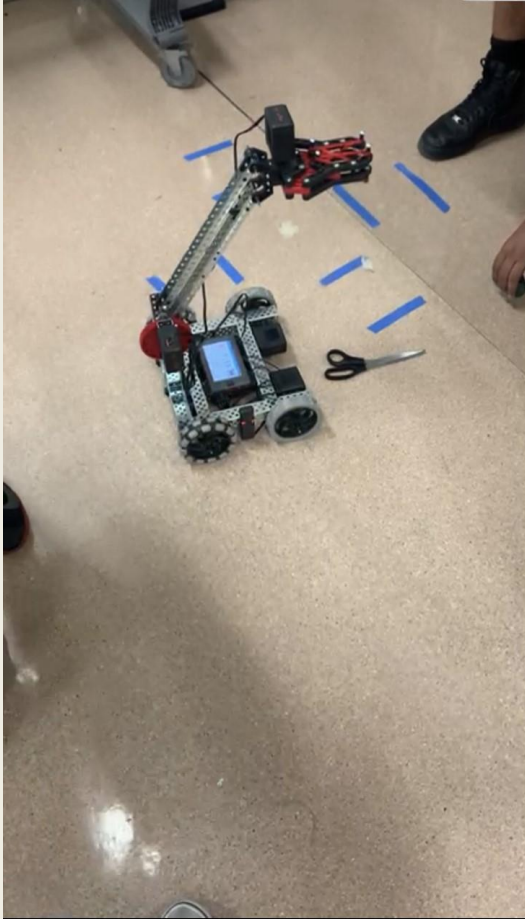

Final design

For the final design we used wood blocks so that the robot had to avoid them, then we used some cardboard to build bumpers. To build the ramp we used two binders which we taped together so that the robot could go above it.

FINAL DESIGN
